

JOIN OUR FIGHT

**RESHORE MANUFACTURING,
RESHORE AGRICULTURE, &
RETURN GOOD-PAYING JOBS
TO AMERICA**

CPA is the leading national, bipartisan organization representing exclusively domestic producers and workers across many sectors of the U.S. economy.

WHO WE ARE

CPA is the only national organization representing exclusively domestic producers across many sectors. We are a bipartisan coalition of manufacturers, farmers, ranchers, and labor organizations that make and grow things in the United States.

Our members believe that America's strength and well being is built and sustained by growing America's productive capacity. We value quality employment and domestic self-sufficiency over cheap consumption.

WHAT WE DO

We are fighting to win the global competition for good jobs and industries through innovative strategies that grow industry and agriculture, balance trade, protect national security, and achieve broadly shared prosperity.

Industry Reshoring Policy Plans

Creating Key Economic Indexes

GOVERNMENT RELATIONS & ADVOCACY

Our Government Relations Team brings decades of government experience, knowledge, and expertise in order to help our members win legislative change in Washington. Our team works closely with legislators, the administration, regulators, agencies, and other key decision-makers in the government to advance strategic trade, tax, and growth policies so our members can prosper.

Annual Conference

Our annual conference in Washington, D.C. connects CPA members with top leaders from Congress, the White House, and key administration officials.

PUBLIC AFFAIRS & COMMUNICATIONS

Our Public Affairs & Communications Team manages and drives multidimensional communications strategies that raise the profile of CPA and our members, helping achieve the organization's policy goals. Our team maintains a strong network of journalists and members of the media at both the national and local level, as well as extensive contacts in cable, broadcast, and radio.

ECONOMICS & RESEARCH

Our Economics Team brings a wealth of knowledge and expertise to develop and deliver independent, objective economic research into the causes and policy solutions to rebuild America's industrial might. Our team specializes in international trade, currency, and industrial strategies for manufacturing, technology, and agriculture, including policies that would reshore domestic production, supply chains, and high-quality jobs.

TAX POLICY

Our tax team is dedicated to tax reform that rebuilds American industrial supply chains, rebalances trade, ends tax discrimination against domestic producers, and penalizes the offshoring of production and profits.

MAJOR PROJECTS & CAMPAIGNS

Coalition for a Prosperous America
June 1 · 🌐

Some lawmakers beholden to Wall Street & Beijing are fighting to remove a provision from the #China competition bill that would require reporting of Chinese entities in U.S. capital markets.
<https://t.co/ehvkM08gHL>

WASHINGTONTIMES.COM
Congress should remove China's state-owned companies from U.S. capital markets

THE CHINA PROJECT

Our China Project will bolster U.S. economic and national security by challenging a foundational element of the Chinese Communist Party's (CCP) ability to govern and even exist: the unfettered access to, and ability to exploit, U.S. capital markets.

Currently, Chinese companies are able to raise trillions of dollars from U.S. investors by selling and trading their securities in our capital markets, as well as through passive investment products like Mutual Funds and Exchange Traded Funds.

CPA has helped pass laws to delist Chinese companies from our stock markets. We have achieved a Presidential executive order to sanction Chinese military and surveillance companies. Investors must no longer fund China's rise and bad behavior.

WARNING: Your prescription drugs may not be safe.

AMERICANS FOR SAFE DRUGS

THIS IS A CAMPAIGN LED BY THE COALITION FOR A PROSPEROUS AMERICA.

We're fighting against unsafe drugs and unfair foreign competition.

Americans for Safe Drugs is a group of doctors, patients, health care industry experts, and advocates fighting to ensure all generic medicines are safe, affordable, and always available. Unsafe generic drugs from foreign manufacturers in China and India have been sold in the U.S. We want every American to be able to trust the generics they take—**every pill, every vial, every time.**

FDA Warning Letters

Chinese and Indian manufacturers receive the most Warning Letters from the FDA for violating safety regulations and quality control measures. Yet they are still allowed to export generic medicines to the U.S.

FDA Inspections

The FDA hasn't inspected foreign manufacturers in China and India that are under Warning Letter since 2019. Incredibly, they have suggested doing virtual inspections of these sites.

Unsafe, Substandard Drugs

Foreign facilities in China and India have received Warning Letters for violating FDA's safety regulations, including for violations like hair in a vial, carcinogens in medicines, and manufacturing processes that are not sterile.

Price gouging & Supply Chain Shortage

Foreign manufacturers in China and India undercut U.S. producers to drive them out of the market and monopolize the industry. Then they raise prices dramatically—up to 2000%—gouging American patients.

CUTTING EDGE RESEARCH

The job quality index

THE JOB QUALITY INDEX

The Job Quality Index (JQI) is an innovative economic model developed by CPA and other partners to track the quality of new jobs created, not just the quality of jobs. The JQI measures job quality for those jobs above the mean are classified as high-quality and those below the mean are low-quality. The JQI clearly shows that U.S. job quality has declined as manufacturing declined.

In 2021, CPA released for the first time ever the JQI of Black, Hispanic, and Asian American workers from 2007 to 2020. This report, which will be updated annually, documented the severe disparity in historical job quality for Black and Hispanic workers compared to the national average for all U.S. workers.

THE DOMESTIC MARKET SHARE INDEX

The Domestic Market Share Index (DMSI) is a new indicator that measures the success of U.S. manufacturing producers in the U.S. home market. The U.S. market for manufactured goods, worth over \$7 trillion last year, is the world’s largest.

Since 2002, when current government data series became available, U.S. producers have lost 10 percentage points of market share to imports, worth around \$700 billion of goods at today’s prices (roughly the GDP of Saudi Arabia). This decline in U.S. manufacturing production means the loss of millions of jobs, thousands of factories and other facilities, and America’s ability to supply itself during war or pandemic.

CPA COMMITTEES

BUY AMERICAN COMMITTEE

CPA members of our Buy American Committee seek to maximize the U.S. content in the goods and services purchased by the government and consumers.

HEALTHCARE COMMITTEE

CPA members of our Healthcare Committee advocate for growing domestic manufacturing of essential generic drugs, personal protective equipment (PPE), and other critical health care products that are vital to our country's health security and national security.

SUPPLY CHAIN COMMITTEE

CPA's Supply Chain Committee includes our members which make the parts, components, tools, and machines that are essential to producing finished goods across our economy. The committee advocates innovative policy solutions to rebuild domestic supply chains.

TAX POLICY COMMITTEE

CPA's Tax Policy Committee fights for tax reform that rebalances trade, rebuilds domestic supply chains, and penalizes the offshoring of production and profits.
